

SOFT CLAWS SIZE GUIDE FOR CATS

Soft Claws for cats are available in four sizes: kitten, small, medium and large. To determine claw size, examine your cat's paws.

Size	Weight (lbs)	Weight (kg)
Kitten	Under 5 lbs	Under 2.2 kg

Soft Claws will fit most kittens between the ages of 4 – 6 months. Some kittens can wear Soft Claws as early as 3 months. Nail caps should fit snugly and not cover the cuticle.

Note: To accommodate smaller kittens, you can trim the base (open end) of the Soft Claws nail cap, making it smaller so it will fit your kitten's nail.

Small	6 – 8 lbs	2.5 – 3.6 kg
-------	-----------	--------------

Some kittens at 5 months may need the small size if they are growing fast, or are large-breed cats.

In general, the small-sized Soft Claws will fit cats that are approximately 6 months of age.

Small-boned, adult cats often wear the small size. If your cat seems smaller than an average, full-grown cat, choose small.

Medium	9 – 13 lbs	4 – 5.8 kg
--------	------------	------------

Most adult average-size cats wear medium.

Large	14+ lbs	6+ kg
-------	---------	-------

Cats weighing approximately 14 lbs. and up. Very large-boned and large-breed cats wear large. Maine Coons, for example, are very large cats and generally wear large.

Note: "Large" refers to how big-boned your breed of cat is, not how obese your cat may be. Overweight cats have the same size claws as slim cats. Sizing should be estimated based on ideal body weight and paw size.
